

CONTENTS

1. About This Report

This report is a presentation of Landfill Input Trends and Landfill Capacity Trends, taken from the Waste Management 2020 Summary Tables data from the Environment Agency.

The information reported is aggregated at County level; it does not identify specific landfill sites by input or capacity.

The Hazardous category refers to merchant hazardous landfills only. The Restricted User category includes restricted non hazardous and hazardous landfills. The Non-inert category includes non-hazardous landfills with Stable Non-Reactive Hazardous Waste (SNRHW) cells. The data does not include waste received by closed landfills for restoration purposes.

2. About Footprint Services

Footprint Services is a consultancy based in Lincolnshire dedicated to the transformation, interpretation and presentation of information relating to waste resources. Underpinning this work is a desire to maximise the efficient stewardship of finite resources within the framework of sustainable enterprise.

Footprint Services produces regular reports relating to the export of Refuse Derived Fuels (RDF) and wood waste as well as various other commodities. Other ad-hoc areas of reporting include European transboundary waste transfers and the development of the UK Anaerobic Digestion sector.

A number of resource-related investigations have been undertaken, applying Industrial Symbiosis techniques based on a decade of activity in this arena. Please contact us for more information about our services.
